Sprint Review
30/11/2023
Group 04 – Group Nice

What went well
- All members did their parts responsibly.
- Project as a whole is still up to the schedule.
- Communication has improved so each member can understand each other's work and problems more .

What to improve
- Class diagram is not fully developed, TA's revision might be needed to make adjustments.
- Due to the difference in studying schedule and deadlines so there aren't as many meetings as other sprints.
- The development of prototypes started later than estimated although they are not compulsory this sprint.
- Because none of the team members are software majors, development planning is still encountering some disagreements and disagreements.
- Having trouble unifying and redrawing the Use-case Diagram
- Due to unreasonable work assignment, the team had to change a few members to perform certain tasks (ie, not following the tasks as previously assigned).

Action items
- Architecture and other documents should be taken care of beforehand so the team can have more time programming together.
- An extra offline meeting may be held to discuss and solve difficult existing problems
- Preparations for developing prototypes will be focused and attended by each member as soon as possible
